GUI Mockups (Task 1)

Engine 1 (Flock Flow) Routine Tracker

Routine History Tracking

Engine 2 (Flight School) Daily Lessons

First Lesson Questions

AvianQuest

1/3

What should form the base of a healthy parrot's diet?

☐ Only sunflower seeds

☒ High-quality formulated pellets

☐ Bread and crackers

☐ Only fruit

Correct! Great job.

Analysis Report

Avian Veterinary and Ornithological Analysis

1. Species Identification and Mutation/Coloration:

The birds in the image are highly likely **Lovebirds** (*Agapornis* species), specifically exhibiting traits consistent with the **Masked Lovebird** (*Agapornis personata*) due to their distinct white eye-rings.

• **Left Bird:** This bird displays a prominent **black mask**, a white chest/collar, and a vibrant **blue body** with a lighter blue tail. Its beak is pale pink. This coloration is characteristic of a **Blue Masked Lovebird** (*Agapornis personata*).

• **Right Bird:** This bird presents with a lighter, grayish-tan mask (rather than black), a white chest/collar, and a **blue body**. Its beak is also pale pink. This phenotype suggests a specific mutation of the Blue Masked Lovebird, possibly a **Slate Blue Masked Lovebird** or a **Misty Blue Masked Lovebird**, where the black pigment in the mask is diluted or altered to a lighter grey/tan hue.

Visible Health Issues:

Both birds appear to be in **excellent physical condition** with no apparent health issues.

• **Feather Condition:** Feathers are clean, smooth, well-kept, and show good contour, indicating proper preening and overall health. No signs of stress bars, feather plucking, or poor feather quality.

Visible Health Issues:

Both birds appear to be in **excellent physical condition** with no apparent health issues.

• **Feather Condition:** Feathers are clean, smooth, well-kept, and show good contour, indicating proper preening and overall health. No signs of stress bars, feather plucking, or poor feather quality.

• **Eyes:** Eyes are bright, clear, and fully open with no signs of discharge, swelling, or cloudiness. The white eye-rings are intact and well-defined.

• **Beak:** Beaks are smooth, well-formed, appropriately sized, and of a healthy pink coloration. No signs of overgrowth, flaking, or lesions.

• **Nares:** Appear clear and unobstructed.

• **Feet and Legs:** Feet and legs appear clean, healthy, and free of scales, lesions, or swelling. The grip on the branch is firm and natural. Claws are well-formed.

• **Body Condition:** Both birds exhibit an alert posture and appropriate body mass, suggesting good nutritional status and overall vitality.

2. Cage Analysis:

Not applicable; no cage is visible in the provided image. The birds are perched on a natural branch against a plain, light background.

3. Droppings Analysis:

Not applicable; no droppings are visible in the provided image.
